Professional Summary

Results-driven IT professional and aspiring Software Developer with 4+ years of enterprise experience in technical support, IT operations, and team leadership within large-scale corporate environments. Hands-on experience building full-stack web applications and implementing modern DevOps workflows through project-based development, including containerization, CI/CD automation, cloud deployment, and secure backend architecture. Strong foundation in modern web technologies, database design, authentication systems, and scalable deployment practices. Passionate about transitioning into software engineering and leveraging operational expertise to build reliable, production-ready applications.

Technical Skills

Languages: C, C++, JavaScript, TypeScript

Frontend: React.js, Redux Toolkit, TanStack Query, HTML5, CSS3, Bootstrap, Angular 9

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Zod Validation

Databases: PostgreSQL, MongoDB, MySQL, Supabase

DevOps / Cloud: Docker, GitHub Actions, CI/CD Pipelines, AWS ECR, Docker Hub, Kubernetes (Learning), Jenkins, Linux, Shell Scripting

Tools / Platforms: Git, GitHub, Postman, Nginx, Vercel, Render

Enterprise Tools: ServiceNow, Active Directory, Office 365, Outlook, MS Teams, Windows OS

Technical Projects

My Mart – Full Stack eCommerce Platform (Personal Project) [Live Demo](#)

- Built a production-ready full stack eCommerce platform using React.js, Redux Toolkit, TanStack Query, Node.js, Express.js, PostgreSQL, JWT, and Zod
- Developed responsive frontend with reusable React component architecture
- Implemented advanced state management using Redux Toolkit
- Integrated TanStack Query for caching, synchronization, and optimized data fetching
- Developed secure JWT-based authentication and authorization workflows
- Added backend schema validation using Zod
- Designed scalable REST APIs using Node.js and Express.js
- Structured relational database schema using PostgreSQL
- Hosted frontend on Vercel, backend on Render, and database on Supabase
- Containerized application using Docker
- Built CI/CD pipeline using GitHub Actions
- Automated Docker image publishing to Docker Hub and AWS ECR
- Prepared deployment workflow for future Kubernetes orchestration

Blogging Platform – MERN Stack (Personal Project)

- Developed full-stack blogging platform supporting authentication and CRUD operations
- Implemented features including comments, likes, tags, and role-based moderation
- Designed MongoDB schemas for users, posts, and comments
- Built RESTful APIs using Node.js and Express.js

- Tested APIs using Postman
- Containerized and deployed application using Docker and Nginx

Professional Experience

Team Lead – Wipro (Citibank Project)

- Lead a team of 10+ associates supporting enterprise service desk operations
- Manage incidents, requests, and escalation workflows ensuring SLA compliance
- Conduct technical reviews and workload prioritization
- Mentor team members on troubleshooting and infrastructure support
- Collaborate with cross-functional teams to resolve critical incidents
- Drive process improvements to enhance operational efficiency

Specialist – Wipro (Citibank Project)

- Managed enterprise incidents and service requests via portal, email, and telephonic support
- Prioritized issue resolution based on impact and urgency while maintaining SLA compliance
- Conducted customer/domain profile migrations ensuring zero-loss data transfer
- Supported enterprise IT ecosystem including Active Directory, Office 365, Outlook, Teams, and Windows OS
- Contributed to process optimization and documentation enhancement

Education

BITS Pilani – Master of Technology, Computer Systems & Infrastructure

- Coursework: DBMS, Data Warehousing, IT Infrastructure, Cloud Computing, Docker, AWS, Kubernetes, Jenkins, Network Security, Software Development

CSJM University – Bachelor of Computer Applications
